Racing games with controller support android

Racing games are among the most popular in all of mobile gaming. It's an extremely competitive genre and there are a ton actually good options. Racing games were among the first to take advantage of phone hardware by utilizing the accelerometer as a steering wheel of sorts to steer cars. There are other control methods, but turning the phone is a classic racer component. This is also one of the most varied genres with an excellent selection of both free to play and premium options. Here are the best racing games for Android!Asphalt 9: Legends is the latest racing game from Gameloft and the latest in the popular Asphalt franchise. It features excellent graphics, solid mechanics, and a metric ton of content to play through. That includes over 800 events, weekly and monthly events, and online PvP action. You also get up to 50 cars to unlock, various upgrades, and more. Its freemium strategy is a little more aggressive than we would normally like. However, aside from that, it's a good arcade racing title with some of the best graphics of any racing game. Asphalt 8: Airborne is still actively updated as well if you want a more mature title. Additionally, Asphalt Xtreme is another excellent arcade racer in the franchise, but with off-road vehicles. Beach Buggy Racing 2 is very similar to games like Mario Kart. It's a kart racer with various special abilities to give you an edge. Players race across a variety of tracks in a variety of locations, each with its own obstacles. The game includes 45 power-ups, over 40 karts to collect, online PvP, various customizations, and a few different game modes. We do wish it had some tertiary features like offline play and Google Play Games achievements. After all, this is a Vector Unit game, the same developers of the Riptide GP series. The Riptide series has those kinds of features. Otherwise, it's a good game. The CSR Racing series is one of the most popular racing games out there. CSR Racing 2 is a drag racing game. You'll be buying cars, adding upgrades, and then racing. It features a campaign mode with plenty of races. You'll also be able to do online racing against people if you want. There are plenty of cars to collect and the graphics are actually pretty good. It's a good time killer in the racing genre. CSR Racing 2 is a freemium game. That doesn't make it bad, but it's something to be aware of. Dirt Trackin' 2 is the sequel to one of the more excellent racing games on mobile. The sequel is also quite good. The game features five classes of cards, a career mode, customizable cars, and a few different control schemes. Additionally, it boasts above average mechanics, varying difficulties, and customizable controls for the player along with PvP multiplayer. Admittedly, the graphics aren't the best compared to most games on this list, but they are better than the first game in the series. However, the level of customization and the content itself more than makes up for it. This is a cheap premium racer with no in-app purchases or ads. Grand Prix Story is a racing sim from Kairosoft. The developers are really good at making quirky, simple simulation games with decent mechanics. You'll be the boss of your own team. That puts you in charge of training drivers, acquiring sponsors, and winning as many races as possible. It's a good approach for those who like racing, but prefer a more hands off approach. Those looking for a realistic experience may be disappointed. However, it's still not a bad game. It's also a pay-one game with no in-app purchases. GRID Autosport is a port of the PC version. It was also one of the best games launched in all of 2019. The game boasts 100 cars along with 100 total races. The game is focused on a single player experience and you not only get adjustable difficulties, but a variety of racing styles and little niceties like hardware controller support. This is one of the easiest recommendations on the list because it feels so complete. The price tag is a bit high, but you get the full PC game along with all the DLC for that one price so it's hard to complain too much. This is one of the good ones, trust us. Hill Climb Racing 2 is one of the newer racing games on Android. It features a simple premise, colorful graphics, and simple controls. You'll be racing up and down hills against opponents. It sounds easier than it actually is. Players can also customize their vehicles, tune them to behave a certain way, and more. The game includes a campaign, an online multiplayer mode, achievements, daily tasks, and challenges. It also works pretty well on older devices. It's a freemium game. That's not a big deal, but we just wanted to let you know. This is also available as an offline racing game as well. Horizon Chase was one of the best racing games of 2015. It features retro-inspired graphics. There is also a lot to do. It features dozens of tracks, a variety of cars to unlock, and more. What makes this game unique is that it has complete Android TV support, and you can use most game controllers with it. There is also an online multiplayer mode and leaderboards to round out the experience. The free version is a demo that lets you try out a few of the tracks for free. The paid version is a scant \$2.99. The developers are still adding new events as well and we couldn't be happier. Yes, you can play this racing game offline as well. KartRider Rush+ is an arcade style kart racer. The game has several game modes, including a speed mode, arcade mode, a ranked mode, and a story mode. There are even time trials so you can lower your times on each track. In addition, there are various customizations for your racer to make it how you want. There are also power-ups to help you mid-race. The mechanics are reasonably fun even if they lack realism. The game's updates come at a rapid pace and some characters are locked behind paywalls. There're not fans of that part, but the rest of the game is pretty good. Mario Kart Tour briefly held the record as the most successful mobile game launch in history until Call of Duty: Mobile came around a few weeks later. The mobile version of the game is a bit watered down from the console experience, but there's enough there to feel like a Mario Kart game better than just another mobile racer. You can unlock a variety of racers from the Mushroom Kingdom, compete in a variety of races, and there are a couple of different game modes as well. It even supports multiplayer after a mid-2020 update. Nintendo needs to tone down the micro-transactions a little bit, but otherwise this is a delightful mobile arcade racer with just enough Mario Kart to feel like a Mario Kart game. Motorsport Manager Mobile 3 is one of the newer racing games on mobile. Technically, it's a racing simulator. However, there are some actual racing mechanics in the game as well. You start with a fictional racing team. You hire employees, upgrade your business, make your car better, and win lots of races and events. It's a surprisingly comprehensive game. You have to plan every pit stop and train your racers to race better. The graphics aren't as good as some others on this list. However, as a racing sim, it's probably among the best from 2018 at the time of this writing. It has the occasional bug and potentially a few balancing issues, but those are very minor complaints. This game is excellent. Price: Free / \$0.99 / With in-app purchasesReal Drift Car Racing is a game that focuses mostly on drifting. You'll be racing around corners trying to get an edge against your opponents. It comes with different difficulties based on your skill level. There are also the usual features, including cars to unlock, a campaign mode, various tracks, and tuning options. Unlike most, this one has a free and paid version. The paid version still has in-app purchases, but it'll get rid of advertising and unlock some additional content. It's not bad overall. Real Racing 3 is among the more realistic racing games on our list which gives some credence to the name of the game. It's also a favorite among our readership. The game is full of content, including over 100 cars from various manufacturers, various game modes including real time multiplayer, and even the game's race tracks are digital versions of real race tracks. There are over 2000 total events with varying rules and types of races. This one is fairly old so we wouldn't blame you for wanting something a little more recent. There is a ton of content to play through with this one, though. The Riptide GP series is one of the most woefully under-radar racing games series out there. It's a waverunner game where you don a jet ski and race against opponents. Renegade has a campaign mode, online multiplayer mode, and various other little things to make it fun. It even includes local multiplayer mode with up to four players on a single machine (if you have enough controllers). The other two games in the series, Riptide GP 2 is also really good. Vector Unit also does other racing games like Beach Buggy Blitz that is really good. Frankly, Vector Unit's racing games are the premium racing games on Android, probably. This is also one of the best offline racing games for Android as well. The latest game is free via Google Play pass if you use it. Top Speed 2 is the successor to Top Speed, a racing game that topped over ten million downloads. The second game in the series is actually pretty good as well. The game boasts over 70 unlockable cars, a surprisingly deep tuning mode, a variety of single and multiplayer game modes, leaderboards, various customizations, and more. The graphics are also quite good with plenty of minor details for car fans. The mechanics and game play aren't too difficult, though, and, like all free to play games, the grind gets more intense over time. The developer, T-Bull, has a rather large selection of racing games and they're all pretty decent. AppsBest Apps, GameLoft, Racing Games Source: Marc Lagace / Android Central Gaming on Android typically requires you to settle for using touchscreen controls. However, some gracious game developers take the time and effort to add support for Bluetooth gamepads — and we love them for it. Since so few games provide this feature, we've taken the time to test as many as we could. Here is our list of the best games that let you play with the best Bluetooth controller in your hands. We'd also recommend getting a Style Ring or PopSocket, which can help prop your phone up at a good angle for gaming. You might recognize some of these games from the best Android games roundup, and for good reason. But you're here for the best games with controller support, after all, so here I present to you the best you can find on the Play Store. Simply put, Call of Duty: Mobile is one of the best Android games ever made. It offers an authentic experience for long-time fans of Call of Duty with a full suite of multiplayer modes to choose from. While the Call of Duty franchise has featured some really awesome single-player campaigns, Mobile focuses exclusively on multiplayer and manages to hit it out of the park by delivering the exact style of action fans have come to know and love. A big reason why the game plays so well is due to the involvement of Tencent Games. They've owned the mobile shooter space with PUBG Mobile, another game that's featured on this list, and fans of that game will recognize the familiar user interface and surprising gameplay performance that's been perfectly optimized for mobile. And unlike PUBG Mobile, Call of Duty: Mobile was quick to receive full support for Bluetooth controllers, which makes everything that much more awesome! The game features the core team deathmatch modes that Call of Duty is known for, along with the Battle Royale mode that was introduced in the main franchise with CoD: Black Ops 4. They could have easily just stuck with the team deathmatch and still had a great game on their hands, but the inclusion of a 100-player battle royale mode and the fan-favorite zombie mode just adds that much more value to this free-to-play game. I've been playing CoD Mobile since the beta, and it has been one of my go-to games whenever I've got a couple of minutes to kill. Because the game is so damn popular, it's super quick to jump into a match, whether you want to play with casuals or go up against more veteran players in a ranked match. There's a "premium" Battle Pass, and the game tries to push its in-app purchases on you as often as possible, but you don't have to spend any money to enjoy this excellent mobile shooter. Call of Duty has won Game of the Year awards for 2019 for a good reason. It's a surprisingly complete version of Call of Duty with full support for Bluetooth controllers. There have been some great racing games released on Android, but few offer the depth of gameplay and brilliant graphics found in GRID Autosport. Developed by Feral Interactive, GRID offers the most authentic racing experience you can play on your mobile phone with full support for Bluetooth controllers. GRID feels like a console-quality game for your phone, featuring console-quality graphics and realistic physics and vehicle damage. There are over 100 cars to drive with an equal number of tracks to burn rubber down the Mushroom Kingdom, compete in a variety of races, and there are a couple of different game modes as well. It even supports multiplayer after a mid-2020 update. Nintendo needs to tone down the micro-transactions a little bit, but otherwise this is a delightful mobile arcade racer with just enough Mario Kart to feel like a Mario Kart game. Call of Duty has won Game of the Year awards for 2019 for a good reason. It's a surprisingly complete version of Call of Duty for phones that's entirely free to play. Tesla vs. Lovecraft is an intense top-down twin-stick shooter that plays well enough just on your phone but really shines with a Bluetooth controller in hand. You play as Nikolai Tesla, who is feuding with H.P. Lovecraft, who, as it happens, has figured out how to open up portals to release grotesque occult monsters upon the world. Fortunately, Tesla has a huge collection of upgradeable weapons, including standard fare like pistols, machine guns, and shotguns to more futuristic weaponry from Tesla's personal army, including the pièce de résistance Tesla mech suit that can cut through waves of enemies in seconds. Weapons spawn randomly around the level, and you need to collect all five pieces of the mech suit before it becomes available to you for a brief amount of time. Each level takes place in a closed arena where monsters spawn at random, and your goal is to take out all the monsters and destroy any Chlulu spawning pools that pop up. There are also boss levels peppered in that feature a gigantic that needs to be destroyed along with the endless swarms of smaller monsters. Those levels are particularly challenging, and you'll need to make good use of the Perks you unlock by collecting XP. That's where the game makes wonderful use of rogue-like AI elements, which ensure that each playthrough of a level is unique. As you shoot at enemies, you collect XP. Fill your XP bar, and you're able to unlock a new Perk, which is typically some sort of character or weapon upgrade that will help you to survive longer or be more efficient at killing monsters, but the perk only lasts for that playthrough, and you lose all perks whether you succeed or fail. There are over 30 levels to play, each of which has three different "planes" (or difficulty levels), with the higher planes offering up bigger challenges for better rewards. There's also a survival mode that tests how long you can last against literally endless waves of enemies and an optional DLC pack that adds more weapons and enemies to the mix. Tesla vs. Lovecraft is an action-packed twin-stick shooter that features endless waves of Lovecraftian horrors. This premium game offers hours of thrilling gameplay with DLC available, too. Evoland 2 is one of those premium games for Android that you just don't want to put down. Initially released in 2015 on Steam, Evoland 2 is a fantastic sequel to the first Evoland and follows suit with graphics and gameplay that evolve as you progress through the story. I thoroughly enjoyed the first Evoland game for Android, and one of my few criticisms of the game was that the story was a bit short. That's not the case with Evoland 2, which features over 20 hours of gameplay. While the first game in the series explored the evolution of RPGs, Evoland 2 has expanded its nostalgic scope by incorporating even more gaming genres. It starts out as a pretty typical action RPG, but as you progress through the story, both the graphics and gameplay take dramatic shifts that work wonderfully to keep the game feeling fresh. Evoland 2 will have you laughing as it constantly breaks the fourth wall, and there are more gaming and pop culture references than you can shake a stick at. This is another great game for fans of RPGs and video game culture and well worth the cost to play. Best of all, there's support for both Bluetooth controllers and Android TV, including spawning pools that pop up. Tesla vs. Lovecraft is an action-packed twin-stick shooter that features endless waves of Lovecraftian horrors. This premium game offers hours of thrilling gameplay with DLC available, too. Evoland 2 is one of those premium games for Android that you just don't want to put down. Initially released in 2015 on Steam, Evoland 2 is a fantastic sequel to the first Evoland and follows suit with graphics and gameplay that evolve as you progress through the story. I thoroughly enjoyed the first Evoland game for Android, and one of my few criticisms of the game was that the story was a bit short. That's not the case with Evoland 2, which features over 20 hours of gameplay. While the first game in the series explored the evolution of RPGs, Evoland 2 has expanded its nostalgic scope by incorporating even more gaming genres. It starts out as a pretty typical action RPG, but as you progress through the story, both the graphics and gameplay take dramatic shifts that work wonderfully to keep the game feeling fresh. Evoland 2 will have you laughing as it constantly breaks the fourth wall, and there are more gaming and pop culture references than you can shake a stick at. This is another great game for fans of RPGs and video game culture and well worth the cost to play. Best of all, there's support for both Bluetooth controllers and Android TV, including spawning pools that pop up. There are also boss levels peppered in that feature a gigantic that needs to be destroyed along with the endless swarms of smaller monsters. Those levels are particularly challenging, and you'll need to make good use of the Perks you unlock by collecting XP. That's where the game makes wonderful use of rogue-like AI elements, which ensure that each playthrough of a level is unique. As you shoot at enemies, you collect XP. Fill your XP bar, and you're able to unlock a new Perk, which is typically some sort of character or weapon upgrade that will help you to survive longer or be more efficient at killing monsters, but the perk only lasts for that playthrough, and you lose all perks whether you succeed or fail. There are over 30 levels to play, each of which has three different "planes" (or difficulty levels), with the higher planes offering up bigger challenges for better rewards. There's also a survival mode that tests how long you can last against literally endless waves of enemies and an optional DLC pack that adds more weapons and enemies to the mix.
