September 11, 2014 I received a call from my doctor's basel doctor who tells me that the results of Biopsy of a lymph node in my neck showed lung cancer. Lung cancer? How is it possible? I am (It was) 39 and I stopped smoking five years before and felt totally 100% healthy. I had my hands full of a 1 year old child and felt as if I could run a marathon if inclined. Nevertheless, what was followed was a test battery, meetings with an oncologist and a full survey on what exactly was happening here. The fact that I felt good was disconcerting from my doctor doctor Quite soon we would have our reply. Yes, I had lung cancer, yes, he was in Stadio IV. but the presentation of her was an anomaly. I have what is called "lymph node only lung cancer". This means in particular is that my cancer is non-small cell lung cancer, but I have no tumors or sign of it in my lungs of sort. It is completely confined to the lymph nodes in my chest (most, if not all) and neck. My doctor only saw this presentation in two other patients during his 8+ years in the sector. After doing genetic tests on my cancer (which has returned as a HER2 mutation, including incredibly rare in lung cancer) a treatment plan has been implemented. Six chemo shifts (cisplatin, avastin and alimta) were prescribed every three weeks. Followed by 35 intense sessions, a vast range of chest and neck radiation. Fortunately my cancer is incredibly sensitive to treatment and I am currently NED. I still maintain chemo every 4 weeks (hoping to reach every 6 weeks at the end). However I feel incredibly lucky and now I want to share my story with the hope that can somehow, in any way, help others. Whether it's to quit smoking (or never start), or to get scanning as a means to get an early diagnosis, or simply to give others hope that you can live and prosper with this horrible disease. Organizations such as the American Lung Association and Force Lung are a huge part of this and your money and / or time are instrumental in making sure that new treatments are studied and awareness for our cause is spreading. Thanks to all those who support my aforementioned companions. Together I am confident that we can and I will die of lung cancer a rarity rather than the norm. Show your deduction deductible donation lung disease funds and lung cancer research, new treatments, pulmonary health education and more. You will now receive email updates from the American Lung Association. I was diagnosed with lung cancer in December 2014- phase 4 not to small cells of adenocarcinoma in both lungs. At 11 December 2014 I was at work and had a chest pain on my left. I was worried when it was still last two hours later: I felt like I couldn't take a "deep" breath, I was thinking I'm having a heart attack. I went to the emergency room and they made an electrocardiogram - everything was good with my heart. They then made a TAC and that when I received the news that changed my life forever. The emergency room doctor said very no means, "we found a place on the lung that seems to be a tumor." I also had pneumonia due to tumor. I looked at my husband and said, "I need a bag, I'm going to be sick." I made my husband promise not to share the news with our two adult daughters or anyone else until we learned more. It was scheduled to have a biopsy and many more tests and would need to see an oncologist. My 44-year-old husband secretly confide in a friend who is a PA in Mayo Clinic; He was so scared he had to find out what this meant for me. We were both avoiding any conversation around "it", even among us. I was completely in denial. We were both very scared and I felt like I was given a death sentence. I mean, who lives more than three months with lung cancer? I was Healthy woman of 63 years. I don't even feel bad when I got pneumonia! No cough, without trouble, without copco - nothing! Fast forward at the end of January 2015. We met with the oncologist and discovered the specifications; not well. Step 4, tumors in both lungs. The recommended doctor chemo once every three weeks for eight hours at a time, it was exhausting! We finally after the holidays and when we knew everything about my diagnosis is shared with my two daughters, who have completely collapsed. I ended up telling the rest of my family shortly thereafter. There were a lot of "I! I You ", tears and, "you can beat this! "I wasn't so sure I could! I started my 12 weeks of chemo, lost my hair, bought seven wigs (I wanted to have fun having fun) and actually managed chemo quite well into consideration. I continued to work, sometimes a, home if I didn't feel up to speed, but most of the time I pushed myself to go to the office. By now I had decided that I would have beaten this and "cancer was messy with the wrong person!" After three months of chemo , my first pets scanning showed that chemo had worked! My tumors were shrinking and was not found new cancer. My incredible doctor wanted to start with a new cutting board treatment that had just been approved by FDA Immunotherapy approved by drug-opened. This was in July 2015 and a year after my tumors continued to narrow down, no new cancer had been detected from the moment I received This miraculous drug. Side effects of open to me are minimal. I have my hair that is my feel big and looks good enough for someone who has bee n thru what I went through. I continued to receive OPDIVE every two weeks and I have scans every three months. In the summer of 2017, my pets scan results were shocking. I didn't have an active cancer, the tumors had practically gone and I was officially in remission - which I never thought I would be! All the prayers and the support I received from my family and friends, helped me through this journey. My trip has been scary sometimes; But he taught me to never take anything - including life - for granted! I try to do the best from every day, I'm on this planet, none of us know when our time will be awake, but up to that moment, I'm so blessed to be alive and feel so harmful. I thank my family, friends and God for having taken me where I am today! I UNDERSTOOD! I was recently appointed as the hero of lung strength to represent the state of Florida to the advocacy week in Washington DC in which the Lung Force Hero from every state will meet to raise awareness and the importance of increasing research funding for treatments Better and precocious detection for lung cancer. No one deserves cancer of any kind! Show your deduction deductible donation lung disease funds and lung cancer research, new treatments, pulmonary health education and more.
