How to switch off dictionary in android

How to switch off dictionary in android phone. How to turn off dictionary in android.

Whatever the new Android phone you purchased or planning to buy, you need a way to transfer your apps, contacts, photos and files from iOS to Android. However Long Yoursoned an iPhone, it is likely that you have become quite in love in the Apple's ecosystem. Many mobile apps are cloud-based and doubly compatible, so you can start using them on Android without interruption; In other cases, you will actively transfer data transfer. The iOS unity to Android is not so difficult that you might expect, but it could take some preparation from you to go smoothly. It is even simpler if you give your device a little clean spring before moving. After all, why dump your new Android with the ancient garbage you never looked at your iPhone? Before setting up your Android phone, make sure your iPhone files are ready to be transferred by following the underlying steps. Transfer to the other direction? How to switch from Android to iPhoneStep 1: data backup to Google Driveinge 1 of 2 (Image Credits: Apple) Image 2 of 2 (credit image: Apple) A practical aid before transferring anything, give a little of Phone a little clean: why the transfer of things you don't want as unwanted photos or videos or contact details for people who don't talk about more? The Google Drive app simplifies the transfer of three types of data key from iOS to Android: your contacts, your calendar and your camera scroll. Simply install the app, log in to your Google account (or create a new if you don't already have one) and then go to Settings> Backup. If you don't want to back up a particular data type, like your calendar, you can turn it out here .Watch out for the photo section, because there are two options here: if you want to upload your photos in original quality, they count for the Google Drive storage limit. If high quality selections, instead the quality will be lower (yes, it is confused) but the difference is difficult to obvious and get unlimited space for those photos. If you are willing to accept a slightly lower quality, Google offers unlimited photographic storage. If you want to upload the originals, they will come from the storage quota. You will not be able to back up iCloud documents using this method. For this, you will have good luck by downloading these documents on a computer, then loading them in Google Drive manually. 2: Backup or transfer your photos (Image Credit: Google) When you activate your new Android phone, you will have the chance to synchronize it to your old iPhone on Wi-Fi or cable. At that point, you can manually transfer all your iPhone photos (and other files) on your new phone. If you have gigabytes of photos, that transfer could take hours and delay to play with your new phone. Fortunately there are several ways to accelerate this process, one of which is the backup option of Google Drive at the top. If you keep your photos to back up on iCloud, reset your iPhone may cause all your photos. So you should consider the transfer of your iCloud photos to Google's photos. Google Photos app is very likely where you will store your new Android photos and your tools to organize and optimize photos are super useful. Even if you don't use iCloud, you should consider downloading the Google Photos iOS application and simply back up your photos before transferring your other data. You can also accelerate this process by eliminating your iPhone photos in Bulk before supporting them, so you're only saving those you really want to maintain. (Credit image: Apple) If you prefer, don't do it through the Google app, you can Your contacts manually from your computer. Provided that you use iCloud synchronization for your data & e â,~ " & and almost certainly do it, because it is aceva by default - you can access iCloud.com and export the data from there. For Export your contacts, go to the Contact section and look for the change icon at the bottom left of the screen. Click, select Select All, then click New New Choose Export VCard. This will download a vCard file on your computer.now, go to contact.google.com and log in. Look at the bottom left of the screen where you will see the import link. Click on what can you select the VCard file you just downloaded. If you have not cleaned up your contacts before exporting it you can resolve any duplication by clicking Merge and Correct. This gets Google to scan your contacts for duplicates and for the most up-to-date contact information. You can also export a subset of contacts: Use the search field to find contacts you want to export, click Settings> Select All> Export VCard.How to delete contacts to iPhoneStep 4: Move your music (image credit : Apple) If you use a musical streaming service for your music library, you don't need to worry: Spotify, Apple Music and the rest have everything Android app, so you can simply download them and start streaming.Apple music for Android is Useful even if you have a great iTunes library. Subscribe to Apple Music and choose iTunes Match and Apple will load a list of songs you own, will allow you to download them on your devices & e â,~ " including your new Android phone. You can also upload your Apple music for Mac / Windows Library to youtube music. At that link, access your Google account, and from there you can simply drag and release the Apple Music / iTunes. M4a files. They will load on your account, at that point you can listen to them all through the music app YouTube. Keep in mind that, as with Apple Music, you will need to register yt Music to easily listen to your library. If you hope to transfer your iTunes / Apple Music playlists to a new streaming app, services like Soundiz or Tune My music can help To automate that process. If you actually want to store your local music files on Android, wait until you have completely configured the phone. So we recommend downloading a T app Hercs Specialized in local music files, then connect the phone to your computer and manually transfer music files. Your best paid option is PowerMP, an extremely popular music app supporting most file types and has robust EQ settings. For a simple option, free, test music i player go.Check out the best music and podcasting Android AppStep 5: Synchronize your phone for iPhone and Android (Image Credit: Apple / Samsung) Now that you have backed up your files , you're ready to start configuring your Android phone. Turn it on and follow the steps provided. If you use a pixel, galaxy, onePlus or something else, at some point you will be wondered if you want to copy apps and data from an old phone to a new one. Samsung, for example, has a tool called Smart Switch that automates iPhone-to-Android transfer, while Google will want to pull files from the unit. This point, you will have the chance to connect your two phones via lightning-to-to-USB-C cable - or more likely, a USB to USB-C adapter connected to the Apple USB charging cable. If you do not have these, you can instead connect the two devices on a shared Wi-Fi network. You can choose which data you want transferred from iOS to Android. I hope you have backed up most of your data, so this will not take too long. However, this is convenient because your Android phone can detect all the iOS apps you downloaded, then offer you to download all the Android apps automatically available on your drawer app for your Drawer.step 6 app: Login / Download apps Replacement (Image Credit: Senengmotret / Shutterstock, com) Most Big-Hitter Apps Sai and Ami from iOS are available on Android, although both ecosystems have i Exclusive. iOS has Apple Arcade; Android has Google Play Pass. If you have chosen to import your iOS apps on Android, you must compare your app list on both phones and make sure they are transferred correctly. If they don't do it, you'll have to go to the Google Play Store and start looking for substitutions. Some of your iOS apps will not automatically move because they come to pay. In most cases, an app you bought bought iOS will not be available for free on Android & e â,~ "So the game you paid \$ 4.99 for the iOS App Store will be another \$ 4.99 if you want to play it on Android. Aotherwise, some apps could be exclusive For iOS, in which case you will have to find an equivalent app to take its place. We collected the best Android apps to replace them, organized in photography, design, education, entertainment, fitness, music, productivity, customization and time. You can also check out The best Android free apps or the best Android games. (Credit Image: Apple) If you're already using Chrome on iOS to synchronize with Chrome on your desktop computer, you don't have to worry about this phase. But if you used the stock browser stock on your own iOS device, you need to export your bookmarks. Safari synchronizes with the desktop version, then go to this and choose File> Export Bookmarks. You can then import them into Chrome on the desktop. What will synchronize with Chrome on your Android device. It is important to note that this will not expect your memorized passwords or autofill entries, then make sure you have a note of any password needed to maintain. Make sure you are disabled Find my phone, signed by iCloud and deleted all your data before selling or passing your iPhone or iPad On.Step 8: Disable iMessage (Image Image: Apple Inc) If you turn on the SIM card and the phone number on an Android phone without disabling iMessage, the new phone may have trouble receiving text messages from other iPhone & e Essentially, Apple will still think your phone number belongs to an iPhone, then the texts sent by iMessage will be readable only in iMessage - which is not available on Android. If you are following our guide, you should still have your iPhone. Enter the phone settings and scroll down to find both "messages" and "facetime". Both submenus, activate the possibility of extinguishing both. This will free your future phone from any bix-up of strange apples. If you already cancel or exchanged in your phone, don't despair. Go to the Deregister iMessage Apple page and enter your phone number near the bottom of the page. You will receive a 6-digit confirmation code; send it, and apple will do something on the backend to free your new phone from iphone label.step 9: deactivate find my iphone, then deleted iFing you 'supplying all your things because you are selling or giving your device, it is fundamental That you do two things: deactivate Find my phone and reset the factory your iPhone. If you don't do the first, then the next owner is not able to use the device; If you don't keep the second, it's a potential disaster of privacy. I can't stress this enough: Don't delete the phone until you're absolutely certain that you have everything you need on your new device. Deleting an iPhone or an iPad is irreversible, so it's always wise to control absolutely everything before. When you are sure everything is fine, go to settings and tap your profile information. Now, tap Find mine and set Find my phone for 'off'. Back to the main settings menu, scroll down to General and tap the reset. Now, tap Clear all content and settings. This was: you're done. Good Androiding! In the market for a new Android? Here are the best Android phones around
