NAME _____

AQUATIC ECOSYSTEMS & BIOMES STUDENT PRACTICE (3.3)

MATCHING

In the space provided, write the letter of the term or phrase that best matches the description.

- | | |
|--|-------------------|
| 1. wetland dominated by non woody plants | a. swamp |
| 2. precipitation that can carry pollutants into aquatic ecosystems | b. profundal zone |
| 3. amount of dissolved salts in water | c. decomposers |
| 4. wetland dominated by woody plants | d. littoral zone |
| 5. area where fresh water mixes with salt water | e. salinity |
| 6. located near the bottom of a pond or lake | f. runoff |
| 7. organisms that break down dead organisms | g. marsh |
| 8. leads to an increase in nutrients in an aquatic ecosystem | h. estuary |
| 9. aquatic zone found near the shore | |

MULTIPLE CHOICE

10. Estuaries are productive ecosystems because they constantly receive nutrients from
- a. rivers and oceans. c. lakes and ponds.
 b. coral reefs. d. photosynthesis
11. Which of the following is a factor that influences where an organism lives in an aquatic ecosystem?
- a. sunlight c. temperature
 b. nutrient availability d. all of the above
12. In which of the following aquatic ecosystems are both littoral and benthic zones likely?
- a. open ocean c. lake
 b. coral reef d. none of the above
13. Estuaries
- a. are always saltwater ecosystems.
 b. are always freshwater ecosystems.
 c. are ecosystems where both fresh water and salt water are present.
 d. prevent the development of salt marshes.

Section: Marine Ecosystems

Read the passage below and answer the questions that follow.

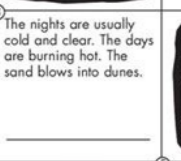

Estuaries support many marine organisms because estuaries receive plenty of light for photosynthesis and plenty of nutrients for plants and animals. Rivers supply nutrients that have been washed from the land, and because the water is shallow, sunlight can reach all the way to the bottom of the estuary. The light and nutrients support large populations of rooted plants as well as plankton. The plankton in turn provides food for larger animals, such as fish, dolphins, manatees, seals, and other mammals often feed on fish and plants in estuaries. Oysters, barnacles, and clams live anchored to marsh grass or rocks and feed by filtering plankton out of the water. Organisms that live in estuaries are able to tolerate variations in salinity because the salt content of the water varies as fresh water and salt water mix when tides go in and out.

Estuaries provide protected harbors, access to the ocean, and connection to a river. As a result, many of the world's major ports are built on estuaries. Of the 10 largest urban areas in the world, 6 were built on estuaries. These 6 cities are Tokyo, New York, Shanghai, Buenos Aires, Rio de Janeiro, and Bombay.

WUMP STATE

Biosphere Mix-up-Fix-up

As you know, Polly has had fun by giving you clues. Read the descriptions of the biospheres below. Then, write the name of the correct biosphere on the line.

<p>It's too different areas, or zones. Forests are one of the largest zones. Together up in a zone of small plants. Some cover the top, which is very cold.</p> 	<p>It's hot all year round. Every afternoon there's a consistent lot of lush green trees and plants are the result. Many animals live here.</p> 
<p>The nights are usually cold and clear. The days are burning hot. The wind blows one direction.</p> 	<p>Dry, grassy plain dotted with trees and shrubs. Home to many large animals, including elephants, zebras, and lions.</p> 

Here's Help!
 Each forest, savanna, desert, or tundra illustration.

You've had a chance to visit each biosphere by now. On a separate sheet of paper draw yourself in each biosphere above and put in a speech bubble to show what you would be saying.

DRAG THE ANIMAL TO ITS CORRESPONDING BIOME.

 DECIDUOUS FOREST	 TROPICAL RAINFOREST	 DESERT
 TUNDRA	 GRASSLAND	
 TAIGA		

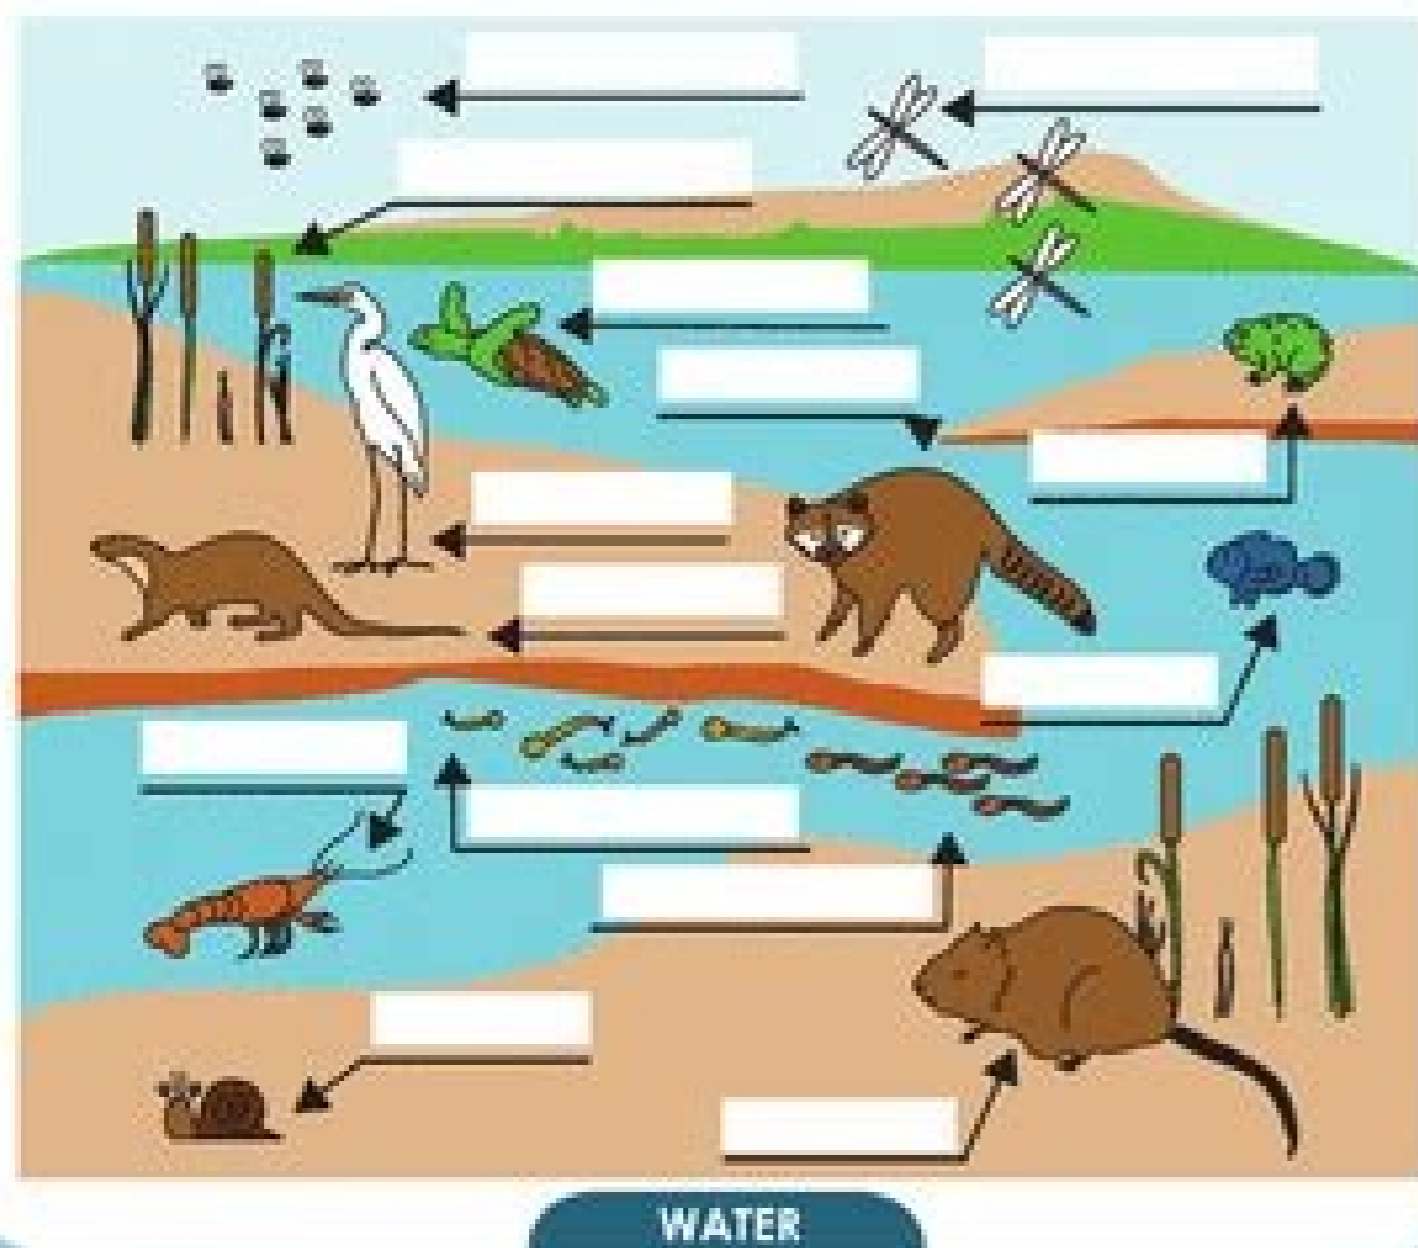

Life in the Marsh: A Freshwater Biome

A marsh is one of the three types of wetlands. The other two types are bogs and swamps.

Directions: Use the words in the word bank to label the animals in the marsh. If you aren't sure, do the ones you know first, and then look up the others in a dictionary.

- | | | | |
|----------|-----------------|----------|-------------|
| muskrat | dragonflies | egret | marsh flies |
| turtle | frog | cattails | crayfish |
| snail | river otter | raccoon | fish |
| tadpoles | mosquito larvae | | |

WATER

Name: _____

Date: _____

Water-Based (Marine/Aquatic) Biomes

Read for **comprehension** below.

Ocean - This biome is a large body of water with a high salt content. Coral reefs are a subset of this biome.

Plant Life - Seaweed, mangrove trees, and algae live in oceans.

Animal Life - Ocean mammals include dolphins, whales, and manatees. Saltwater fish like sharks, swordfish, and tuna live in oceans.

Freshwater - This biome contains water that has far less salt content compared to an ocean. Freshwaters biomes include: Rivers, streams, ponds, and lakes. Wetlands are a combination of freshwater and land, such as a bog or marsh.

Plant Life - Water lilies are a common lake plant, and a wide variety of grasses grow near rivers and streams.

Animal Life - Reptiles, amphibians, and fish all live in freshwater biomes.

Draw appropriate plant and animal life in each aquarium.

Ocean

Freshwater

Large mammals of the Rattical, like ox Musk and the caribA, are strongly isolated against the cold and migrate to the most calculated areas in the winter. The Rottical Tundra is produced in regions of the mountain-fried mounting in very high elevations. Some Taigas locations include: Alaskacentral CanadaEuropenuthern Asian - Siberia due to cold temperatures and slow organic decomposition, Taigas has slim and acid soil. There are two types of tundra, the Artican Tundra and the Alpine Tundra. This allows the vegetation to grow at an almost constant rate. Jeff Vanuga / Corbis / Getty Images The Ethnic Tundra is located in the North Extreme Hemisphere around the North Pole. Taigas, also called Boreal Forests or Conventor Forests, are forests of dense perennial leaf trees that extend through northern America, Europe and Asia. They are the largest soil biome of the world. It is characterized by extremely cold temperatures and Earth that remains frozen throughout the year. The tundra biome is characterized by extremely cold temperatures and landscapes without frozen. To escape the harsh winter conditions, many animals such as squirrels and hare, burrow, underground for shelter and heat. Most of this precipitation is in the form of snow. Strong winds blow at speeds greater than 100 miles per hour. Its cone shape allows snow to fall more easily and prevent the branches from breaking under the weight of ice. Trusty alpine tundra areas are plains without trees located in extremely high altitudes. The vegetation consists of short shrubs, pastures, A e ~ and perennial roseton. Unlike the tundra of the Rattic, the Sun remains in the sky for approximately the same amount of time throughout the year. This area receives more rainfall throughout the year than the Tundra.
