\$25

More about Twitch: Fixed: Twitch Is Giving Me A Black Screen in Chrome Solution 1: Allow Flash player and Java script Twitch black video screen will appear if the flash player or JavaScript is not allowed in the browser. Solution 4: Re-install/Update the application You can check the website 'app.twitch.tv' for the possible update of the application. Conclusion By following the above solutions, you can easily resolve the "Twitch black screen" issue. This solution requires, obviously, to uninstall it at first and then download the latest installation file from the Chrome website. Click on the highlighted search result to open Windows firewall. Now, click on "Advanced settings". Click on "Inbound Rules" to open the list of all inbound rules. Find Twitch application in the list of inbound rules. Users have reported that doing so could help fix the black video screen issue. This might be causing the "Twitch application not working" problem in your system. If this is the case, we recommend you to access Twitch without proxy or VPN. Fixed: Twitch Desktop App Black Screen Solution 1: Try resetting the router The problem may be arising due to improper communication between the application and the internet. Solution 3: Clear the cache, cookies and browsing data It is a good idea to clear the Google Chrome cache every once in a while. After the reset, your internet service should work fine which will, in turn, resolve the application issue. Right click on the rule and click on "Properties". Make sure that the "Enables" checkbox is checked and "Allow the connection" option is highlighted. Now, press "Apply" and then press "Ok" to close the window. Repeat the procedure for "Outbound Rules" to allow the outgoing traffic as well. Reboot the system for changes to take effect. We will recommend you to check whether there is a VPN service running in the background and disable it before launching the application to ensure the proper functioning of the application. Fixed: Twitch App Completely Black Screen If you are still experiencing Twitch App Black Screen, please try these steps in the following order: Uninstall the Twitch app Restart your phone. Reinstall the Twitch App and launch it. Solution 4: Check Hardware Acceleration Settings Disabling hardware acceleration setting fixes the Twitch black screen during video play. You should also restart the system in case the problem is rising due to the problem in system configuration. There could be multiple reasons behind this barrier of communication such as MAC address issue, IP address issue, or some other technical problem. Solution 3: Disable Virtual Private Network (VPN) Service Twitch does not allow the usage of VPN service while practicing on their platform. You can disable hardware acceleration by following the steps described below: in Google Chrome address bar type chrome://settings/system and press Enter. Click on Use hardware acceleration when available to disable hardware acceleration (make sure this is set to off), relaunch your browser. Most of the times, this issue is caused by the problematic configuration of router which can be resolved by simply reset the router. Hopefully, the Twitch application will work without any problem. But, if a VPN service is detected by Twitch application, it stops the connection temporarily with the host until the service is neutralized. Solution 2: Update Google browser or reinstall Google Chrome It is always a good practice to update your browser because every new release fixes a lot of bugs in the outdated version. Google Chrome updates typically install themselves, but you can manually trigger an update by visiting the "About Google Chrome" page. It's in the top-right corner of Chrome's window. Solution 2: Check Windows Firewall Setting for Twitch App Open start menu and type "Firewall". Here is how to clear the data stored in cache: Open Google Chrome. Click on the menu icon (three horizontal lines) in the top-right corner. In order to delete everything, select All time. Check the boxes next to Cookies and other site data and Cached images and files. Click Clear data. On older versions of Chrome, this icon will resemble a square with three horizontal lines instead. Click More tools and go to Clear browsing data. At the top, choose a time range. If the user is not detected, it is not an issue. Solution 5: Do not use VPN or Proxy server Sometimes if you are using some proxy server or VPN to access Twitch, it might be possible to see the black screen on Twitch while streaming. If updating your browser hasn't solved the issue, try reinstalling Chrome. Sometimes, users may face a black screen issue when watch twitch game streaming on Google Chrome or on Twitch App. Twitch is really an amazing and very popular online game streaming website. In order to do this: Type chrome://settings/content in the google chrome address bar and press Enter. Locate JavaScript and Flash in the list of Content settings. Click on JavaScript and choose Allowed by clicking the switch button. Go back and click on Flash button in order to open Flash Player settings in Chrome. Change Block sites from running Flash to Ask first by clicking the switch button. Click Add in front of Allow and add in the allow list. Restart your browser. Many gamers use it a lot to watch live video game streaming.
